Two sensors. Both say: traffic jam. One is lying.

We built a city that lies, to test an AI that must not believe it.

AI proposes. It never decides alone.

01

Brain proposes

Detects the incident, proposes one typed action

CIVIS

02

Guardian authorizes

Scores trust, signs permission for that exact action

9antra

03

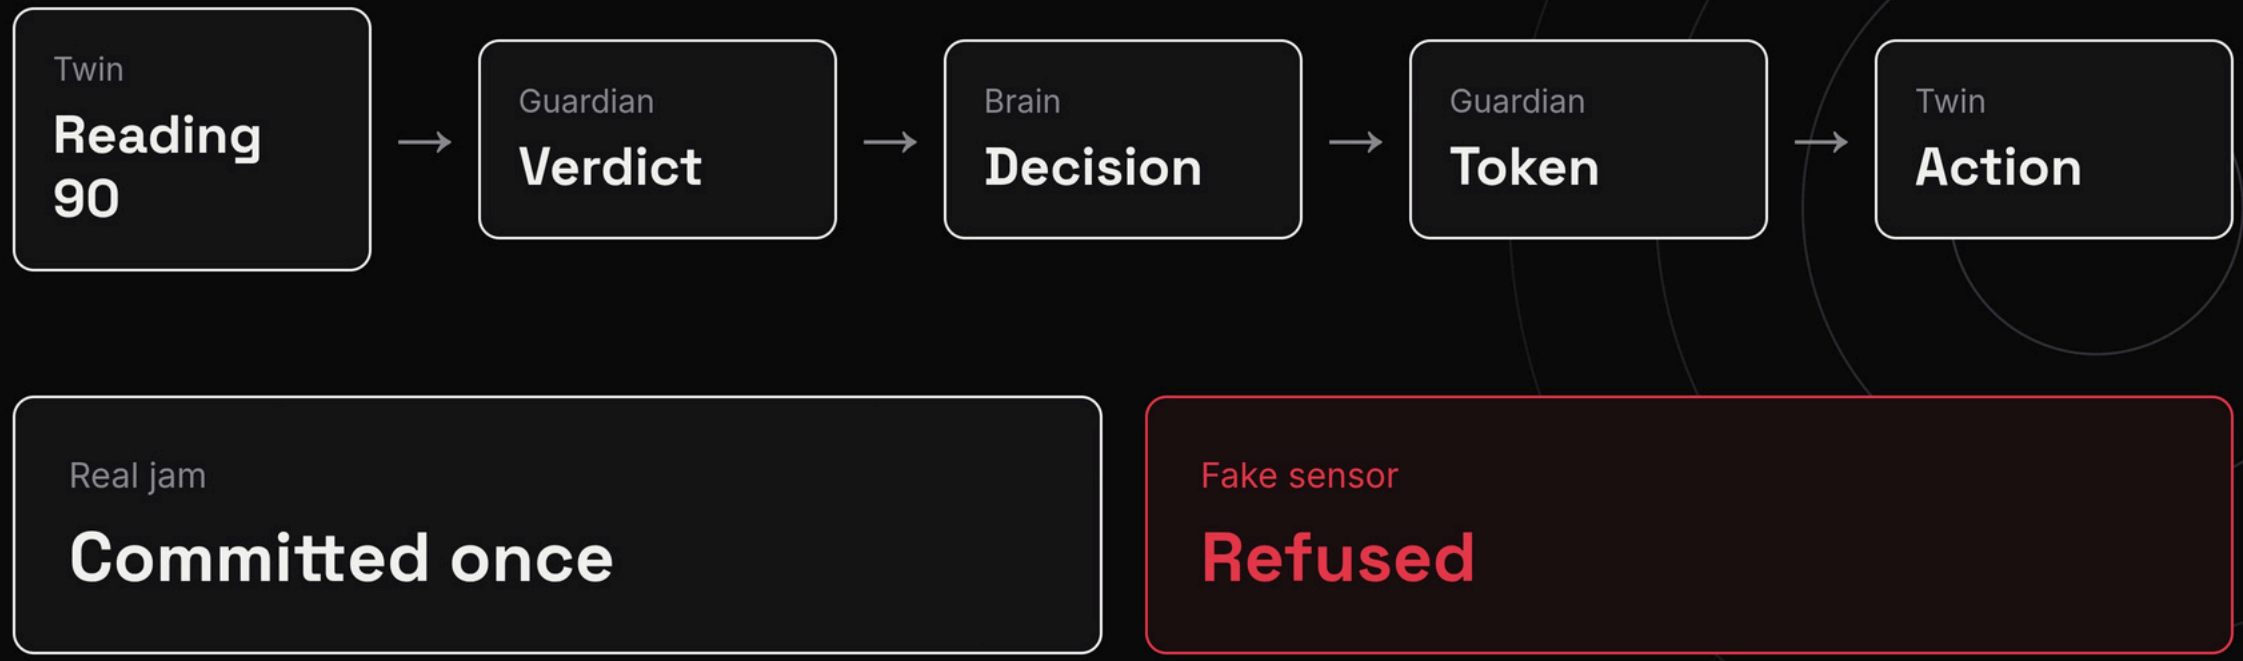

Twin enforces

The simulated city checks the signature, enforces its own limits

Trinity

Separation of powers, for city AI.

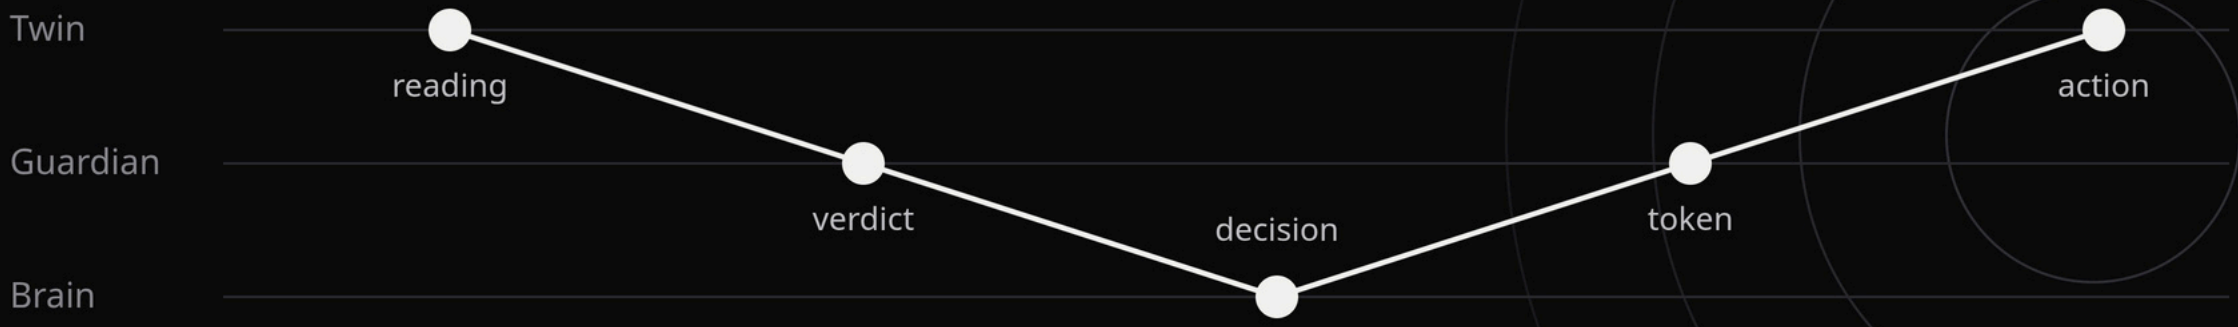

Follow one number

Same number, two fates.

stand-in Brain and Guardian

Don’t trust us. Read the black box.

One run ID in every layer's log

A cause-to-effect chain for every action

One token: one exact action, 60 simulated seconds, one use

A silent layer means no action

What is proven, and what is not

PROVEN

The Twin refuses forged and replayed tokens in signed mode

STAND-IN

Our Brain and Guardian runs, marked in every log

NOT YET

One run with all three real layers

Trust is what a system refuses to do.
